Project Idea

Original data

3 columns

7082 rows

Use shark attack data to give water safety and travel recommendations

- Focus on countries and time variables
- Focus on tourism, leisure and water sports:

  Surfers, divers, beachgoers
- Present data findings in our service-oriented travel guide: SAFEWATERS

SAFEWATERS

Data Cleaning and Transforming

Final data

17 columns

3952 rows

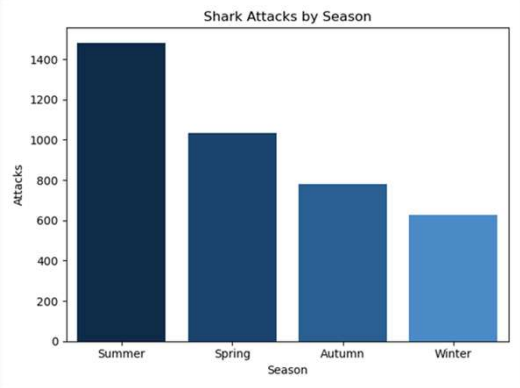
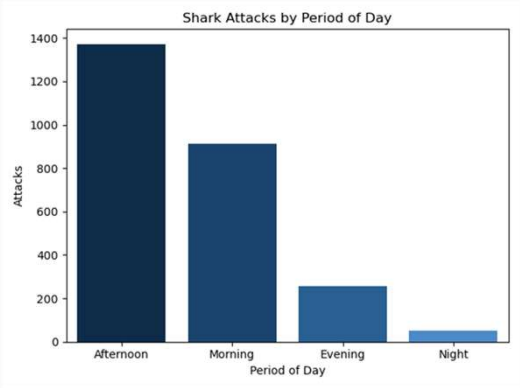
Research Hypotheses and Insights

When?

Shark attacks are more likely to occur during summer months than winter months

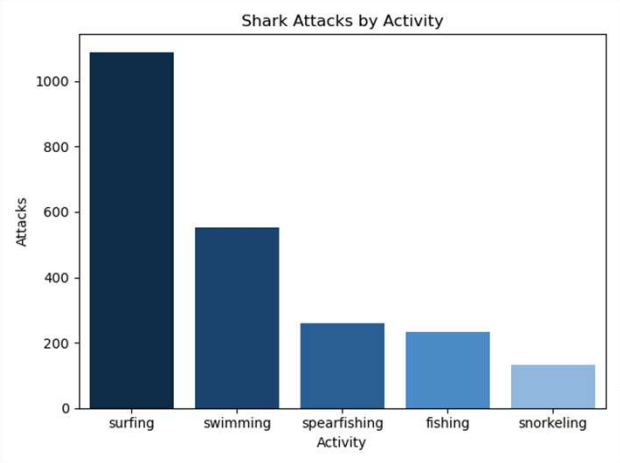
Shark Attacks are more likely to occur during afternoon hours than any other time of day





What?

Swimming is the activity with the highest number of shark attacks, due to being the most common activity in the ocean

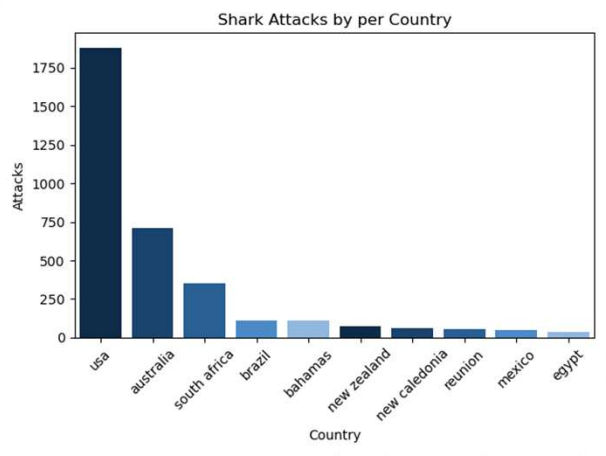


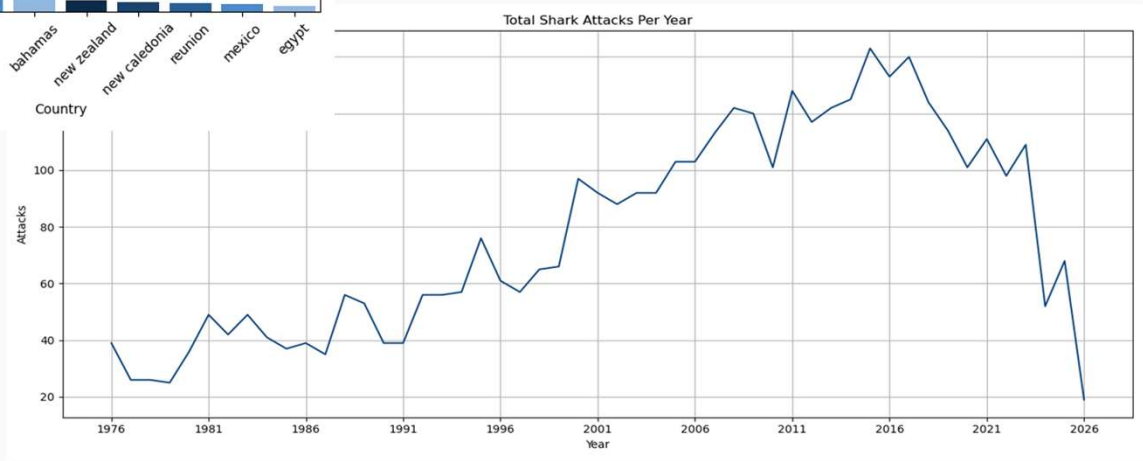
Research Hypotheses and Insights

Where?

The USA, Australia and South Africa account for the highest number of shark attacks globally

Shark attacks have increased over time not only on top destinations, but globally





Recommendations, Challenges, Learnings

Challenges

Cleaning
Use of Regex

Plotting
Organizing the visualizations code to make them appealing
